

# VideoMoverPlus™

iPixCel video streaming and transport solution for fixed and vehicular applications

## Video streaming solution while on the move

Direct connect from eye of the camera to your receive station via Sprint CDMA or Inmarsat BGAN networks. No middle server, no server hopping, and no hardware to carry around. Use it for mission critical, fast action video streaming from cars, boats, trucks, airplanes, helicopters, and ships using CDMA cellular or hand held satellite terminals using Inmarsat BGAN networks. No extra hardware to carry around and no monthly server charges. All you need is a modern notebook, your choice of camera, and wireless network access. We also support up to HD streaming quality if aggregated cellular bandwidth solution is used. Support is provided for 1xRTT, EVDO-Rev0 and Rev1 with automatic bandwidth adjustment and motion compensation features.

### Features:

- Built in FTP server and free hosting of video and pictures bundled with VideoMoverPlus™.
- World class store and forward video with built-in innovative progressive upload/download of video in near real time from remote over BGAN at DVD, HD, or better quality. BurstVideo™ is unique for its near real time video playback over low bit rate wireless networks and is optimized for BGAN and cellular networks.
- Bandwidth adjustment working from 56k to high bandwidth ranges and covering single ISDN line to fiber optics by selecting different templates.
- Template selections for 64k, 128k, 256k, 384k or higher bandwidths and background IP streaming over Inmarsat Network.
- Fully automated operation with one click "STOP and START".
- TCP to UDP translation on the fly. No need for hardware, routers, or complicated setup procedures.
- Ultra portable using a modern Notebook and DVCAM for SEND and a modern DESKTOP at the RECEIVE.
- Direct connect using Static IP address over BGAN and CDMA or using built-in Dynamic IP tracking module bundled with the VideoMoverPlus™.
